Pioneers in acoustic monitoring

SA Instrumentation Limited news update for 2015

As we fast approach the end of 2015 and the start of 2016, it seems fitting to reflect on what has been a hectic, exciting and productive year for SA Instrumentation Limited, one of the UK's leading designers and manufacturers of innovative acoustic technologies. The past 12 months have seen us continue to develop our portfolio of products with a growing range of applications, from marine mammal detection to advanced noise detection equipment, not to mention our ability to customise solutions where required.

Our global profile has increased thanks to the range and versatility of our products, many of which have made the news in the past few months due to the variety of projects with which we are currently involved around the world, as you will see below in the newsletter. Also, as a sign of our commitment to advancing SA Instrumentation production ambitions, we moved into a new test centre in Tayport, Fife, in June.

We are looking forward to a busy 2016, full of interesting and challenging projects and we very much hope that you will be part of that.

In the meantime, we would like to take this opportunity to wish you all a wonderful Christmas and New Year!

Ocean Business April 2015

Decimus becomes the Bomb Listener November 2015

Hon Yuen of Factual TV, decided to enter a film competition, to make a documentary about our project with [Marine Conservation Society](#), and how we developed the

Our stand was busy and we met some great people with very interesting projects, looking to monitor marine mammals and some just noise.

We have booked our stand for
